Gpsmap 62st update

EasyGPS is the free, easy way to upload and download waypoints, routes, and tracks between your Garmin GPSMAP 62st GPS and your Windows computer or laptop. Backup your favorite Garmin POIs, create and send new waypoints and geocaches to your GPS, or print a map of your GPS tracklog. To get started, download your free copy of EasyGPS. Download EasyGPS EasyGPS runs on Windows 11, 10, 8.1, and 7. New features were added to EasyGPS 8.07 on March 1, 2022 Here are some of our favorite tips to get the most out of your Garmin GPSMAP 62st GPS with EasyGPS and ExpertGPS, our full-featured mapping software: If you're a geocacher, EasyGPS lets you download geocaching GPX and LOC files directly to your Garmin GPSMAP 62st. EasyGPS calculates the area of any Garmin GPS track or route, making it a perfect tool for calculating acreage on your farm, ranch, or business. Read our tutorials on using EasyGPS and ExpertGPS to calculate area. Geotag your photos so everyone can see exactly where you took them. EasyGPS automatically geotags photos from any digital camera, allowing you to map them on flickr.com and in Google Earth. Convert any coordinate format and datum. EasyGPS converts between lat/lon, UTM, MGRS, and hundreds of national grid coordinate formats. Just one click converts all of your Garmin data between any format or datum (WGS84, NAD27, NAD83, and dozens more). Backup your Garmin GPSMAP 62st GPS waypoints, routes, and tracks after each outing, so your GPS data is always safe on your computer. Many EasyGPS users clear the memory in their Garmin each time after backing up in EasyGPS. This gives them the maximum data storage for recording waypoints and tracklogs on their next adventure. View your GPS waypoints and tracks in Google Earth. You can view all of your EasyGPS data in Google Earth. For the ultimate experience, including the ability to send Google Earth data and KML files to your Garmin GPS, check out the one-click Google Earth integration in ExpertGPS. ExpertGPS also lets you view your GPS data over topo maps, aerial photos, and your own scanned trail maps. If you're serious about getting the most out of your GPS, check out the free trial of ExpertGPS, the ultimate mapping software download for your Garmin GPSMAP 62st GPS. EasyGPS is 100% FREE software! No ads or spyware Download geocaches to your GPS Backup and print out your waypoints and tracks ExpertGPS adds street maps, topos, and aerial photos! Convert and reproject your GPS, CAD, and GIS data View your GPS tracks and data in Google Earth Use Garmin Express to keep your device software up to date. Additional Software GpsGate Client, Ver. , as of Sep 21, 2011, Download Firmware GPSMAP 62 GPSMAP 62s GPSMAP 62sc GPSMAP 62st GPSMAP 62stc Firmware updates, map updates, device backups and other optional software improvements for your Garmin GPSr can all be managed with the Garmin Express application. Versions for both PC and Mac are available in Software. Connect the GPSr via USB and enter Mass Storage Mode. Open the Garmin Express application and choose your device from the menu. Select desired updates and follow the prompts as directed to complete available updates. The Garmin WebUpdater program can also find and install updates available for your Garmin GPSr. Versions for both PC and Mac are available in Software. Connect your Garmin GPSr via USB and enter Mass Storage Mode. Run the WebUpdater application and select your device from the menu Follow the prompts to keep your GPSr updated GPSMAP 62, 62s, 62st Firmware (B1113) Update History Changes made from version 7.20 to 7.30: Update time zone name from 'Hong Kong' to 'Beijing'Update GPS valid date to May 2039 Changes made from version 7.10 to 7.20: Fixed issue with GB Discoverer Maps Updated magnetic compass deviation Changes made from version 7.00 to 7.10: Added support for G3 Marine Cartography. Changes made from version 6.90 to 7.00: Added support for Garmin HuntView PlusChanges made from version 6.80 to 6.90: Fixed possible shutdown when viewing depth information on the map Changes made from version 6.30 to 6.80:Added backup of critical dataFixed possible route crashFixed adventures not importing from SD cards Changes made from version 6.30 to 6.70:Added backup of critical dataFixed possible route crashFixed adventures not importing from SD cards Changes made from version 6.10 to 6.30:Improved 'Save Portion' track feature - When saving a portion, the device now remembers that position in the track log so it can be used as a track segment for future portion savingFixed possible erroneous track point on power on Fixed formatting issue with certain map names in the map information list Changes made from version 5.90 to 6.10:Fixed possible shutdown when scrolling through the waypoints list Changes made from version 5.80 to 5.90:Fixed possible shutdown when reviewing a route in RussianFixed several track distance statistic issuesFixed waypoint distances being listed incorrectly for Waypoint Averaging Changes made from version 5.70 to 5.80:Fixed possible issue where BirdsEye satellite imagery would be permanently disabled after bootingChanges made from version 5.60 to 5.70: Improved cartography support (Garmin Hunt View maps)Improved boot time when a large amount of BirdsEye satellite imagery is presentChanges made from version 5.40 to 5.60:Fixed issue with barometer when auto calibration is turned off (62s, 62st, 78s, 78sc models)Fixed issue with power off pressure trending (62s, 62st, 78s, 78sc models)Fixed missing ascent, descent, and elevation statistics when reviewing certain tracksFixed possible shutdown when displaying the option menu in Czech Changes made from version 5.30 to 5.40:Improved average ascent, average descent, and vertical speed data fieldsFixed potential shutdown when reviewing a routeFixed potential issue when programming a chirp (62s, 62st, 78s, 78sc models) Changes made from version 5.10 to 5.30:Added support for additional ActiveRouting cartographyImproved support for Garmin LakeVu HD cartographyImproved display of marine-specific lines in BlueChart g2 mapsFixed issue retrieving PLSS data in certain TOPO US 24k maps Changes made from version 5.00 to 5.10:Improved pairing behavior with cadence sensors (62s, 62st, 78s, 78sc models)Fixed potential issue when logging a geocache as found Changes made from version 4.90 to 5.00:Added support for VIRB Remote (62s, 62st, 78s, 78sc models). Main Menu > MENU Key > Change Item Order to add - See TrailTech (for more informationAdded Icelandic keyboardFixed issue with route calculations always avoiding seasonally closed roadsFixed possible issue when missing a turn while using the Active Route applicationChanges made from version 4.80 to 4.90:Added support for additional ActiveRouting cartographyFixed issue with incorrect letter capitalization of certain map pointsFixed issue where wirelessly transmitting a geocache to another device would result in an error message when trying to view the received geocache in BaseCamp (62s, 62st, 78s, 78sc)Changes made from version 4.60 to 4.80: Improved map performance in densely-populated urban areasFixed trail searching when using multiple active routing mapsFixed issue with saving a track's 'show on map' status across a power cycleFixed issue with displaying tracks on the map after performing an area calculationFixed possible issue with searching for an address in cities with extremely long namesFixed possible issue with viewing geocache descriptions in night modeFixed minor graphical issue with certain data fields on the map pagesAdded 'Geocache Start Page' option to geocache setup page (Setup -> Geocaches)Improved ascent and descent calculationsFixed potential shutdown when searching for adventuresFixed issues with alphabetical sort from waypoint managerFixed potential issues with geocaching dashboard Changes made from version 4.40 to 4.50:Improved map drawing at low zoom levelsFixed inability to edit archived tracksFixed ability to use NMEA depth for waypoints and tracksFixed display of geocache coordinates with non-default map datumFixed overlapping position text for right to left languagesFixed overlapping position text in data fields Changes made from version 4.30 to 4.40:Added Adventure support with latest version of BaseCamp - See TrailTech (for more informationAdded support for new tempe sensor. See TrailTech (for more informationChanges made from version 3.90 to 4.30: Added new route activity types and improved BaseCamp compatibility - See TrailTech (for more informationAdded ability to sort waypoints alphabeticallyAdded support for Kenwood NMEA Waypoint SentenceImproved GPS response at low speedsFixed issue with preserving routes imported from BaseCamp (identical maps required)Fixed issue where the map would sometimes not refresh when using the active route pageFixed issue with the Glide Ratio data fieldFixed Spell Search in GermanFixed possible issue with Where To? > Address searching Changes made from version 3.80 to 3.90:Added Geocaching with Photos (Improved elevation data stored in track logsFixed issue with 'Hut' point type in TOPO Australia & New Zealand mapsFixed issue with magnetic north offset when projecting a waypoint Changes made from version 3.50 to 3.60:Fixed an issue with the reporting of pressure from the barometric altimeter (GPSMAP 62s/62st/78s/78sc)Changes made from version 3.40 to 3.50: Added Photo Viewer applicationImprovements to the geocaching experience - See TrailTech (for more informationFixed a potential hang on startup when importing large numbers of waypoints, tracks, routes, or geocachesFixed issue with very long geocache descriptionsFixed shutdown when reviewing certain geocache descriptionsFixed issue where some auto-archived tracks would be named in English regardless of user languageFixed bug that could cause some geocaches to not importFixed issue with track log recording while using the stopwatchFixed issue with the anchor drag alarmFixed issue with total ascent and total descent fields not displaying values greater than 9999 metersModified default map trails to appear as dashed red linesFixed potential issue with screenshot color reproduction Changes made from version 3.00 to 3.40:Added support for advanced geocache logging with OpenCaching.com - See TrailTech (for more informationAdded Garmin Spanner mode to GPSMAP 78, GPSMAP 78s, and GPSMAP 78sc devicesFixed issue with multilingual custom POI filesFixed issue with setting proximity alerts - The unit of measure can be changed by entering the 'Proximity Alarms' page, pressing the 'Menu' key, and selecting 'Change Units'Changes made from version 2.80 to 3.00: Updated magnetic Earth field dataImproved GPS performanceImproved support for BirdsEye™ Satellite Imagery (each provider's imagery can be configured independently)Increased the maximum number of supported JNX files to 250 from 200Fixed issues with WAAS/EGNOSFixed issue with track navigation sometimes not adding waypoints to the Active Route listFixed issue with track and route review from the map page if you came from the elevation plotFixed issue with MPC map labels disappearingFixed issue with gpi files that have alerts attached to the pointsFixed issue with progress bar displaying properly on power upFixed issue with track navigation not adding waypoints to the Active Route list when they are exactly equal to a track pointFixed shutdown when unit had more than the maximum number of JNX files on itFixed shutdown related to topographical maps and land cover text sizeFixed Glide Ratio to Destination fieldFixed problem with profiles and the fields on the map pageFixed an issue with magnetic north reference and waypoint headingsFixed shutdown on the map screen when a waypoint was being moved to the same location as a geocache or other POIsFixed issue where proximity alerts could only be set in feet regardless of what was selected as a Distance/Speed unit in the setup pageFixed an issue with archived tracks not displaying properlyFixed an issue with having too many custom symbols on the deviceModified the 'Arriving at Destination' message banner so that it no longer appears when navigating to a geocacheChanges made from version 2.70 to 2.80: Fixed shutdown related to the current track that occurred after updating the softwareFixed a hang that occurred when a unit had 1000 auto-named waypointsFixed issue with marine map points sometimes drawing with the incorrect symbolChanges made from version 2.60 to 2.70:Added support for chirp™ (62s, 62st, 78s, 78sc)Fixed problem with certain custom mapsFixed problem with certain JPEG imagesFixed issue with Sight 'N Go and user north reference (62s, 62st, 78s, 78sc)Changes made from version 2.50 to 2.60: Fixed issue while using spell search in route plannerFixed issue where tracks could not be disabled from the mapFixed issues with odometer distanceFixed shutdown while panning the map for extended periods of time Changes made from version 2.40 to 2.50:Added Automatic Shaded Relief optionAdded display color to gpx filesAdded import indicator for gpx filesAdded multicaching supportAdded track review page improvementsImproved map selection - Visit for more informationImproved keyboard responsivenessFixed issues with inconsistent altimeter readingsFixed calendar to display all geocache finds and attempts on the correct dayFixed occasional shutdownsFixed paging after logging a geocacheFixed shutdown on About PageFixed spot sounding display on certain maps Updated map review of tracks and routes - The distance shown is now the distance along the route or trackChanges made from version 2.30 to 2.40: Improved display of position formats on keyboard pageFixed problem with position entry when using Latvian TM position formatRemoved occasional screen glitch when routes are being calculatedAdded Spanner interface option to 62 models Changes made from version 2.10 to 2.30:Added Geocache FilteringAdded brightness adjustments for BirdsEye imageryImproved WAAS performanceFixed intermittent issue with two keyboard input bars appearing on spell search GPSMAP 62sc, 62stc Firmware (B1340) Update History Changes made from version 5.20 to 5.30: Added support for Garmin HuntView Plus Changes made from version 4.90 to 5.20: Fix possible route page crash Fix issue importing adventures from SD cards Changes made from version 4.90 to 5.10: Fix possible route page crash Fix issue importing adventures from SD cards Changes made from version 4.80 to 4.90: Improved 'Save Portion' track feature - When saving a portion, the device now remembers that position in the track log so it can be used as a track segment for future portion saving Fixed possible erroneous track point on power on Fixed formatting issue with certain map names in the map information list Changes made from version 4.70 to 4.80: Fixed possible shutdown when reviewing a route in Russian Fixed several track distance statistic issues Fixed waypoint distances being listed incorrectly for Waypoint Averaging Changes made from version 4.60 to 4.70: Fixed possible issue where BirdsEye satellite imagery would be permanently disabled after booting Changes made from version 4.50 to 4.60: Improved cartography support (Garmin Hunt View maps) Improved boot time when a large amount of BirdsEye satellite imagery is present Changes made from version 4.30 to 4.50: Fixed issue with barometer when auto calibration is turned off Fixed issue with power off pressure trending Fixed missing ascent, descent, and elevation statistics when reviewing certain tracks Fixed possible shutdown when displaying the option menu in Czech Changes made from version 4.20 to 4.30: Improved average ascent, average descent, and vertical speed data fields Fixed potential shutdown when reviewing a route Fixed potential issue when programming a chirp Changes made from version 4.00 to 4.20: Added support for additional ActiveRouting cartography Improved support for Garmin LakeVu HD cartography Improved display of marine-specific lines in BlueChart g2 maps Fixed issue retrieving PLSS data in certain TOPO US 24k maps Changes made from version 3.90 to 4.00: Improved pairing behavior with cadence sensors Fixed potential issue when logging a geocache as found Changes made from version 3.70 to 3.90: Added support for VIRB Remote. Main Menu > MENU Key > Change Item Order to add - See TrailTech (for more information Added Icelandic keyboard Fixed issue with route calculations always avoiding seasonally closed roads Fixed possible issue when missing a turn while using the Active Route application Changes made from version 3.60 to 3.70: Added support for additional ActiveRouting cartography Fixed issue with incorrect letter capitalization of certain map points Fixed issue where wirelessly transmitting a geocache to another device would result in an error message when trying to view the received geocache in BaseCamp Fixed potential issue when editing a waypoint's position in certain languages Changes made from version 3.40 to 3.60: Improved map performance in densely-populated urban areas Improved EXIF image orientation data in camera photos Improved EXIF compass heading data in camera photos Fixed trail searching when using multiple active routing maps Fixed issue with saving a track's 'show on map' status across a power cycle Fixed issue with displaying tracks on the map after performing an area calculation Fixed possible issue with searching for an address in cities with extremely long names Fixed possible issue with viewing geocache descriptions in night mode Fixed minor graphical issue with certain data fields on the map Changes made from version 3.30 to 3.40: Added quick access to the geocaching options from the compass and map pages Added 'Geocache Start Page' option to geocache setup page (Setup -> Geocaches) Improved ascent and descent calculations Fixed potential shutdown when searching for adventures Fixed issues with alphabetical sort from waypoint manager Fixed potential issues with geocaching dashboard Changes made from version 3.20 to 3.30: Improved map drawing at low zoom levels Fixed inability to edit archived tracks Fixed display of geocache coordinates with non-default map datum Fixed overlapping position text for right to left languages Fixed overlapping position text in data fields Fixed minor display issue when navigating to a waypoint, geocache, track, route, or photo that is part of an adventure Changes made from version 3.10 to 3.20: Added Adventure support with latest version of BaseCamp - See TrailTech (for more information Added Find Next Closest geocaching option when routing is set to Prompted. Changes made from version 2.80 to 3.10: Added new route activity types and improved BaseCamp compatibility - See TrailTech (for more information Added ability to sort waypoints alphabetically Added support for Kenwood NMEA Waypoint Sentence Improved GPS response at low speeds Improved camera white balance Fixed issue with preserving routes imported from BaseCamp (identical maps required) Fixed issue where the map would sometimes not refresh when using the active route page Fixed issue with the Glide Ratio data field Fixed Spell Search in German Fixed possible issue with Where To? > Address searching Changes made from version 2.70 to 2.80: Added symbol filtering to FIND > Waypoints and Waypoint Manager Improved GPS response at low speeds Improved elevation data stored in track logs Fixed daylight saving time issue in Sun and Moon application Fixed issue that could occur when restoring map zoom level defaults Fixed track log naming when using BaseCamp Changes made from version 2.60 to 2.70: Added Geocaching with Photos (Fixed issue with magnetic north offset when projecting a waypoint Changes made from version 2.40 to 2.60: Improvements to the geocaching experience - See TrailTech (for more information Fixed issue with NMEA Fixed issue with track log recording while using the stopwatch Fixed issue with very long geocache descriptions Fixed shutdown when reviewing certain geocache descriptions Fixed issue where some auto-archived tracks would be named in English regardless of user language Fixed bug that could cause some geocaches to not import Fixed issue with track log recording while using the stopwatch Fixed issue with total ascent and total descent fields not displaying values greater than 9999 meters Fixed potential shutdown while scrolling through Garmin Connect photos Modified default map trails to appear as dashed red lines Changes made from version 2.20 to 2.40: Added support for advanced geocache logging with OpenCaching.com - See TrailTech (for more information
